KEEPING KIDS WITH DIABETES SAFE AT SCHOOL

Crystal Crismond Jackson
Director, Safe at School
American Diabetes Association

Friends for Life
Orlando, Florida
July 3, 2014
This activity is supported by an unrestricted educational grant from Novo Nordisk.
Mission

**TO PREVENT AND CURE DIABETES**
AND IMPROVE THE LIVES OF ALL PEOPLE AFFECTED BY DIABETES

We deliver mission through:

- Research
- Information & Support
- Advocacy & Public Awareness
ADA Youth Initiatives

Safe at School Campaign

Everyday Wisdom Kit for Newly Diagnosed

CAMP

National Youth Advocate
Session Key Points

- Back-to-school considerations
- Safe at School Campaign
- School diabetes care challenges
- Federal and state laws
- Development of 504 and strategies to overcome challenges
- Resources
Goals for School Diabetes Care

• Schools must provide a medically safe environment for students with diabetes.

• Students with diabetes must have the same access to educational opportunities and school-related activities as their peers.

• Schools must work with parent and student to support transition to independence.
School Best Practice Components

- Blood glucose monitoring
- Recognition and treatment of hypo and hyper
- Insulin/medication administration
- Carbohydrate intake/accurate calculation
- Self-management permitted for capable students

Diabetes care should be the same at school as it is at home to ensure smooth, healthy and safe transition from home to school.
What is Needed to Achieve

• Availability of trained personnel and/or school nurse
• Access to immediate routine and emergency treatment
• Self-management and self-possession anywhere, anytime for mature and capable students
• Optimal blood glucose range for test-taking
• Full participation in all school-sponsored activities
• Blood glucose in target range for exams

These are some examples of what your child needs in place at school in order to be safe, healthy and best positioned to achieve academic success.
We Know That....... 

- Diabetes care is 24/7 
- Child with diabetes cannot take a break 
- Smooth transition from home to school is essential 
- Child must have access to equipment, medication, and assistance is essential 
- Written care plans are essential, as provided for by federal and state laws
A Word About School Nurses....

ADA supports goal of full time nurses.

However:

• Most schools do **not** have a full-time school nurse.

• Even a full-time school nurse is not at all places at all times.

• The needs of students with diabetes must be met.

• ADA supports a safe model that utilizes trained school personnel in the absence of a school nurse.
Safe at School Campaign

All school staff members need to have a basic knowledge of diabetes and know who to contact for help.

The school nurse is primary provider of diabetes care, but other school personnel must be trained to perform diabetes care tasks when the school nurse is not present.

Students should be permitted to provide self-care whenever they are at school or school-related activities.
Safe at School Principles Endorsed by:

American Academy of Pediatrics
American Association of Clinical Endocrinologists
American Association of Diabetes Educators
American Diabetes Association
Academy of Nutrition and Dietetics

Disability Rights Education and Defense Fund
Juvenile Diabetes Research Foundation
Pediatric Endocrine Society
Pediatric Endocrinology Nursing Society
Endocrine Society
Who Is Discriminated Against Because of Diabetes?
Challenges Facing Students with Diabetes

- Failure to have trained staff to assist student with diabetes.
- School’s refusal to administer insulin.
- School’s refusal to administer glucagon.
- No coverage during field trips and extracurricular activities.
Challenges Facing Students with Diabetes

- School’s refusal to permit blood glucose checks outside of the health clinic or office.
- Sending child to “diabetes school.”
- School’s refusal to allow a student to attend the school at all.
Is Your CWD Being Discriminated Against?

**Discrimination occurs when students:**

- Don’t get the care they need, OR
- Only get the care they need:
  - By missing out on school activities, or
  - Only when a family member can provide assistance at school
- Learning is compromised.
- Health is compromised.
- Legal rights are compromised.
Federal and State Laws to the Rescue

These laws can help level the playing field and ensure a safe and fair school environment for our children

Federal laws
• Americans with Disabilities Act (ADA)
• Section 504 of the Rehabilitation Act of 1973 (Section 504)
• Individuals with Disabilities in Education Act (IDEA)

State laws, regulations and guidelines
Prohibit discrimination on the basis of disability.

Also prohibit retaliation for asserting the right not to be discriminated against.

NOT limited to disabilities that affect learning/academic progress.
Definition of Disability

To be protected by ADA/504 the student must have a disability, defined as:

- a physical or mental impairment that substantially limits one or more of major life activities
- a record of such an impairment, or
- being regarded as having such an impairment.

This includes children with diabetes!
Substantial Limitation of Major Life Activities (ADA & 504)

- Endocrine function
- Caring for one’s self
- Performing manual tasks
- Eating

- Walking
- Breathing
- Learning
- Working
- Speaking

NEED NOT BE LEARNING!
Americans with Disabilities Act (ADA)

- **Covered schools:** public, private, schools and day care centers –
- **Not covered:** religious institutions
- **Requirements** – Schools must: make reasonable changes in practices and policies to:
  - avoid discrimination
  - afford equal opportunity, unless doing so imposes an undue burden.
Section 504

- **Covered schools:** All public schools and private schools (including religious schools) that receive federal financial assistance.

- **Requirements** – Schools must:
  - Identify children with disabilities.
  - Provide free and appropriate public education (FAPE).
Section 504

• **Requirements** – Schools must:
  
  – Educate children with disabilities with other students as much as possible.
  
  – Allow parental participation in decisions.
  
  – Provide equal opportunity to participate in nonacademic and extracurricular activities.
Individuals with Disabilities Education Act (IDEA)

• A child with diabetes is covered if he or she needs special education and related services in order to benefit from an education. Diabetes must adversely interfere with academic performance.

• School must provide special education program and related services. Children must be educated in the least restrictive environment.

• Team that includes parents, special education experts, and school staff develop Individualized Education Program (IEP) which outlines plan to achieve specific educational goals.
Diabetes and IDEA

- May be eligible if another disability – other than diabetes - that limits learning/academic progress
- Frequent swings in blood glucose adversely impact learning
- Students who qualify under IDEA are also covered by ADA/504, but do not need a separate 504 plan
Religious Schools

- Must comply with federal law if federal funds are received.
- May develop 504 Plans/IEPs for students.
- Sources of federal funds may include free or reduced breakfast and lunch programs, technology assistance or program grants, funding for textbooks and supplies.
Navigating the 504/IEP Process

- Parents/guardians should contact school’s 504/IEP coordinator
- School may initiate if suspects a need for special education or related services
- An evaluation for eligibility under 504 or IDEA will be conducted by school staff knowledgeable about your child
- Once an eligibility determination has been made, the 504/IEP team will convene to develop a written plan
Establishing Eligibility

Parent/Guardian Must Do More than Simply State Child has Diabetes

• Note from clinician stating that your child has a disability because he is substantially limited in endocrine function

• Note can also explain other major life activities that are limited when your child is experiencing hypo- or hyperglycemia
Review: Comparing the Laws

Section 504:
• Public and private school receiving federal funds.
• Major life activity substantially limited does not need to be learning.

ADA:
• Same as 504, except covers daycares and camps.
• Does not cover religious affiliated schools/programs unless federal funds received.

IDEA:
• Special education law.
• Must demonstrate that diabetes or another disability adversely impacts ability to learn and to progress academically.
State Laws and Regulations

• State and local laws and regulations (i.e. Board of Nursing regs) vary regarding who may perform various aspects of diabetes care.
• Often there is no statewide policy. Rather, policy is determined district by district.
• Some states have developed guidelines.
• Regardless of state and local laws, requirements of federal laws must be met.
• Some states have passed school diabetes care legislation or changed Board of Nursing regulations.
School Diabetes Care Laws

Board of Nursing Action: Nevada, Colorado, Utah, Alaska
What Does Your State Law Say?

• Is delegation of diabetes care tasks by the school nurse permitted, prohibited, or unclear?

• Is there a statute that addresses medication administration in the schools?

• Is there a Good Samaritan law?

• What is your state’s nurse to student ratio?

• What state specific resources are available?
Maryland, New York, Pennsylvania

Please contact Crystal Jackson CJackson@diabetes.org if you live in one of these states and are willing to share your child’s school diabetes management challenge and willing to get involved with the Association’s advocacy efforts in these states.
Other Considerations

• School Menu
• Standardized Testing – College Boards
• Post-Secondary Rights
School Menu

• Refer to USDA Guidance

• Schools must make food substitutions or modifications for students with disabilities

• Address menu and carb counts in your child’s 504 Plan or IEP

• Work with your school nurse and a dietician to calculate carb counts if not already provided
College Boards

- PSAT, SAT, AP Tests
- Complete Student Eligibility Form
- Must provide documentation which may be your child’s high school 504 plan
- Typical accommodations for students with diabetes include frequent breaks, longer breaks, access to food or supplies
Post-Secondary Rights

- Compliance with Section 504 and ADA
- FAPE not required
- No identification requirement
- Must provide academic adjustments so that it does not discriminate because of student’s diabetes
- Documentation required – high school 504 plan is not enough
Written Plans Are Implementation Tools

- Diabetes Medical Management Plan (DMMP)
- Individual Health Plan (IHP)
- Section 504 Plan (504)
- Individualized Education Program (IEP)
DMMP –
Diabetes Medical Management Plan

- Document developed and signed by your child’s health care provider.
- This can also be a health care plan, diabetes care plan or physician’s orders.
- Sets out your child’s school diabetes care regimen.
- Used as a basis for development of Section 504 Plan or other written education plan.
- Should be updated annually or if your child’s regimen, level of self-management, or school circumstances change.
- Template in NDEP Guide
What Is a Section 504 Plan?

A written document where the parents and school agree on the services & modifications that the student needs.

Each child with diabetes has individual needs.

A Section 504 Plan must be individually developed.

Template online.
504/IEP Plan: Possible Contents

- Recognition and prompt treatment of hypoglycemia and hyperglycemia by trained school personnel during school day, field trips, and extracurricular activities.
- Immediate access to diabetes supplies and equipment.
- Unrestricted access to snacks, water and bathroom.
- Classroom blood glucose monitoring.
504/IEP Plan: Possible Contents

- Adherence to care schedule (routine blood glucose testing, insulin administration, meals and snacks eaten on time).
- Reasonable time/instruction to make up assignments and tests missed due to diabetes.
- No penalties for absences due to diabetes (illness/doctor’s appointments).
- Identify trained school personnel.

Back-To-School Strategies

- Approach in spirit of cooperation and work with the school team.
- Be realistic and reasonable!
- Communication is paramount.
- Provide supplies, snacks, quick-acting form of glucose.
- Encourage your child to wear a medical ID jewelry.
Working through disagreement: ADA Legal Advocacy Strategies

EDUCATION. Negotiation. Litigation. Legislation.

- **Educate** school personnel about diabetes and legal obligations.
- **Negotiate** using resources such as NDEP school guide, ADA resources, and medical device trainers.
- **Litigate** if necessary – OCR, due process, state court, federal court.
- **Legislate** if all else fails and clear legal barriers exist.

Diabetes Care in the School and Day Care Setting

Diabetes is one of the most common chronic diseases of childhood. There are about 1.25 million children with diabetes in the U.S. The percentage of children who have been diagnosed with diabetes is increasing, and the problem of diabetes in children is likely to become more widespread. The American Diabetes Association (ADA) is recommending that schools provide education and training for children with diabetes to help them to lead a normal life and to receive the best care possible. This guide provides a comprehensive overview of the best practices for the care of children with diabetes in schools.

Negotiate: Strategies

• Make requests and note objections IN WRITING – Email works!
• Obtain expert opinion letter from your child’s health care provider.
• Gather resources to support your position.
• Remember: Push for your ideal situation, but focus on the absolute necessities and consider compromising on the non-necessities.
Litigate: When and How?

When education and negotiation fail...

• Preliminary step: School district due process or grievance proceedings

• File complaint with:
  – U.S. Department of Education, Office of Civil Rights;
  – Department of Justice;
  – or state Department of Education

• File lawsuit in state or federal court
Legislate: When?

Legislate, if educate, negotiate, and litigate are not successful.

- Consider changing state law or policies if current laws and policies do not provide students with diabetes the protection they need
- Contact the Association first
• Legislation or regulatory change achieved in 35 states (as of June 2014).

• California Supreme Court decision (August 2013) held that trained school staff members are permitted to administer insulin to students.

• Office for Civil Rights recently issued a letter of finding making it clear that SWD must have equal access to extracurricular athletics.

• Office for Civil Rights recently issued a letter of finding making it clear that charter schools are public schools and have the same federal anti-discrimination law obligations.

• Launch of new child care initiative in 2013 to better meet the needs of very young children in the child care – diabetes.org/childcare.
Next Steps......

• Read the information on www.diabetes.org/safeatschool about legal rights and written plans.

• Call us at 1-800-DIABETES if you need help or have questions.

• Work with your child’s health care provider to develop or update your child’s DMMP.

• Schedule a meeting with the school nurse and/or principal to review DMMP.

• Help identify training resources.

• Initiate the 504/IEP process or update your child’s plan by contacting school’s 504/IEP coordinator (principal, guidance counselor, teacher)

We’re here to help you!

CAUTION: Keep in mind – especially if you are really frustrated:

• Most disagreements with schools can be resolved as you educate and negotiate with school staff.

• If you get to the point that you feel litigation or legislation is the only solution, please request assistance from an American Diabetes Association Legal advocate before taking legal action: 1-800-DIABETES
